- Basic journal entries and ledger posting
- Adjusting entries and trial balances
- Financial statement preparation
- Analysis of financial ratios and interpretations

Scenario Overview:The problem presents a fictional company, Sunrise Electronics, which is preparing its financial statements for the fiscal year ending December 31, 20XX. It provides a series of transactions, adjustments, and additional data that require careful analysis and application of accounting principles.

Dissecting the Problem ComponentsThe problem is typically divided into several parts, each building upon the previous:

- Recording TransactionsThe initial section involves journalizing a series of transactions, such as sales, purchases, expenses, and other financial activities. Accurate recording here sets the foundation for subsequent steps.
- Posting to Ledger AccountsOnce transactions are journalized, they are posted to the respective ledger accounts. This step ensures that all account balances are up-to-date.
- Adjustments and Trial BalanceAdjusting entries are made for accrued expenses, depreciation, and prepaid items. These are essential to ensure that financial statements reflect the true financial position.
- Preparation of Financial StatementsUsing the adjusted trial balance, the income statement, balance sheet, and cash flow statement are prepared.
- Financial Ratio AnalysisFinally, ratios such as current ratio, debt-to-equity, and profit margins are calculated and analyzed for insights into the company's performance.

Step-by-Step Breakdown of the SolutionTo ensure clarity, the solution to Problem 2 is broken down into detailed steps, with explanations for each.

Step 1: Recording Transactions

Key Transactions:

- Sale of goods worth \$50,000 on credit
- Purchase of inventory for \$20,000 cash
- Payment of salaries totaling \$5,000
- Incurring utility expenses of \$1,200 on account
- Borrowing \$10,000 from the bank

Each of these is journalized with proper debits and credits, ensuring adherence to double-entry accounting principles.

Example: Sale of goods on credit:

| Date | Account Titles | Debit | Credit |
|------|----------------|-------|--------|
|------|----------------|-------|--------|

||-----||-----||-----||-----|| MM/DD | Accounts Receivable | \$50,000 | || | Sales Revenue | | \$50,000 | This entry increases assets (accounts receivable) and recognizes revenue.

Step 2: Posting to Ledger Accounts All journal entries are posted to relevant ledger accounts: Accounts Receivable Sales Revenue Inventory Cash Salaries Expense Utilities Expense Notes Payable

This process involves transferring the journal entries into ledger T-accounts, maintaining proper balances.

Step 3: Making Adjusting Entries Adjustments are crucial for accuracy. Common adjustments include: Accrued Expenses: Salaries incurred but not paid (\$1,000) Prepaid Expenses: Insurance paid in advance, with \$500 of expense recognized Depreciation: Equipment depreciated at \$2,000 annually Unearned Revenue: Revenue received but not yet earned, totaling \$3,000

Sample Adjusting Entry for Depreciation:

| Date  | Account Titles           | Debit   | Credit  |
|-------|--------------------------|---------|---------|
| MM/DD | Depreciation Expense     | \$2,000 |         |
|       | Accumulated Depreciation |         | \$2,000 |

Step 4: Preparing the Adjusted Trial Balance After posting all adjustments, an adjusted trial balance is prepared. This involves listing all account balances in order to verify that total debits equal total credits.

Sample Data:

| Account                  | Debit    | Credit   |
|--------------------------|----------|----------|
| Cash                     | \$15,000 |          |
| Accounts Receivable      | \$20,000 |          |
| Inventory                | \$10,000 |          |
| Equipment                | \$50,000 |          |
| Accumulated Depreciation |          | \$2,000  |
| Accounts Payable         |          | \$4,000  |
| Notes Payable            |          | \$10,000 |
| Sales Revenue            |          | \$50,000 |
| Salaries Expense         | \$6,000  |          |
| Utilities Expense        | \$1,200  |          |
| ...                      | ...      | ...      |

Step 5: Financial Statement Preparation Using the trial balance, the income statement and balance sheet are prepared.

Income Statement Highlights: Total Revenues: \$50,000 Total Expenses: Salaries (\$6,000), Utilities (\$1,200), Depreciation (\$2,000), etc. Net Income: Calculated as Revenues minus Expenses

Balance Sheet Highlights: Assets: Cash, Accounts Receivable, Inventory, Equipment minus Accumulated Depreciation Liabilities: Accounts Payable, Notes Payable Equity: Owner's Capital + Retained Earnings

Step 6: Ratio Analysis and Interpretation Finally, key financial ratios are computed: Current Ratio: Current Assets / Current Liabilities Debt-to-Equity Ratio: Total Liabilities / Shareholders' Equity Profit Margin: Net Income / Sales

These ratios help assess liquidity, leverage, and profitability, offering insights into the company's financial health.
